

EXPERIMENT: STUDENT MARKS USING COMMAND LINE

Experiment No.	03
Date	17/09/2026
Title	Java Program to Read Marks of Five Subjects Through Command Line and Print Total and Average

Objective / Aim

To write and execute a Java program that reads marks of five subjects through command-line arguments and calculates the total and average marks.

System Requirements

Hardware

- Standard PC/Laptop
- Minimum 4 GB RAM

Software

- Windows / Linux / macOS
- Java Development Kit (JDK 17 or later)
- Text Editor or Java IDE
- Command Prompt / Terminal

Algorithm / Logic Description

1. Start the program.
2. Read five subject marks from the command-line arguments using args[].
3. Convert the command-line values from String to integer using Integer.parseInt().
4. Add the five marks to calculate the total.
5. Divide the total by 5.0 to calculate the average.
6. Display the total marks and average marks.
7. Stop the program.

Source Code

```
public class Marks {  
    public static void main(String[] args) {  
  
        int m1 = Integer.parseInt(args[0]);  
        int m2 = Integer.parseInt(args[1]);  
        int m3 = Integer.parseInt(args[2]);  
        int m4 = Integer.parseInt(args[3]);  
        int m5 = Integer.parseInt(args[4]);  
  
        int total = m1 + m2 + m3 + m4 + m5;  
        double average = total / 5.0;  
  
        System.out.println("Total Marks = " + total);  
        System.out.println("Average Marks = " + average);  
    }  
}
```

Compilation & Execution Commands

```
javac Marks.java  
java Marks 80 75 90 85 70
```

Sample Input

```
80 75 90 85 70
```

Sample Output

```
Total Marks = 400  
Average Marks = 80.0
```

Result

The Java program was successfully implemented and executed using command-line arguments. For the given five subject marks, the program correctly calculated and displayed the total and average.
